Smartphones > Samsung Galaxy S7

[Description](#)[Technical Characteristics](#)

According to this scheme, the Galaxy S7 would again declined in two versions. A 5.2-inch model, and an Edge of 5.5 inches edition. In both cases, the screen would offer a definition of 1440 x 2560 pixels. The processor meanwhile will be either a Snapdragon 820 or an Exynos 8890. The RAM would be raised to 4 GB.

On the back of the smartphone, be found the 20 MP of Sony Xperia Z5 camera, while the front webcam would offer 8 megapixels. The battery would have a capacity of 3500 mAh, and all would turn directly on Android 6.0 Marshmallow. Storage space would be 16, 32 or 64 GB depending on the model.

TV & Smartliving > Apple Watch

**369€****BUY**[Description](#)[Technical Characteristics](#)

Estendi con facilità la tua rete Wi-Fi di casa con il repeater N300 di ZyXEL dal design compatto con montaggio a parete e di facile installazione.

Il prodotto consente di estendere la copertura della rete Wi-Fi del tuo modem all'interno della casa in modo semplice e veloce per qualsiasi rete 802.11b/g/n.

Per installare il repeater Wi-Fi basta inserirlo in una presa elettrica e premere il tasto WPS, l'apparecchio si collega al modem Wi-Fi di casa, estendendo la copertura della rete senza fili nelle stanze prima non raggiunte.

Estendi con facilità la tua rete Wi-Fi di casa con il repeater N300 di ZyxEL dal design compatto con montaggio a parete e di facile installazione.

Il prodotto consente di estendere la copertura della rete Wi-Fi del tuo modem all'interno della casa in modo semplice e veloce per qualsiasi rete 802.11b/g/n.

Per installare il repeater Wi-Fi basta inserirlo in una presa elettrica e premere il tasto WPS, l'apparecchio si collega al modem Wi-Fi di casa, estendendo la copertura della rete senza fili nelle stanze prima non raggiunte.

Global Goals

TIM takes action to support the commitment of world leaders united to face the challenge of sustainable development.

Poverty and hunger, health and education, economic and gender inequalities, water and clean energy, and responsible development and consumption are just some of the major problems humans face.

Junior TIM Cup

Let's go back in the field.

Also this year we train the boys to the values of sport and informed use of the network . With Junior TIM Cup - Football oratories 30,000 children from all over Italy have already shared the excitement of a big dream. In 2015-16, through the winning combination of sports and education, we continue our commitment: to raise children happy today to be better adults tomorrow.

TIM and Huawei: signed an agreement for the development of Internet of Things solutions for the mobile networks

**Mobile is everything
Interview with Mats Granryd,
Director General of GSMA**

[Devices](#)[Smartlife Services](#)[Assistance Services](#)[Who We Are](#)[The Group](#)

News

 [back](#)[Group Description](#)[News](#)[Governance](#)[Business & Market](#)[For Investors](#)

TIM and Huawei: signed an agreement for the development of Internet of Things solutions for the mobile networks

TIM and Huawei signed today in Barcelona a Memorandum of Understanding (MoU) for the development of IoT solutions on Narrowband IoT technology (NB-IoT), aimed at growing and sustaining this new market.

Thanks to this agreement TIM and Huawei continue their collaboration on NB-IoT technology that started in 2015. In fact, in Turin TIM will open the first Open Lab for research and innovation in Italy dedicated to "NB-IoT", open for companies and developers to support and accelerate the growth of Internet of Things services and the progress of industrial applications.

TIM and Huawei will perform laboratory and field trials on NB-IoT solutions together with partners from vertical industries, thus promoting the fast improvement and deployment of this technology on the market.

This agreement represents an important step for the evolution of the 4G mobile network and future 5G towards Internet of Things, a sector in strong development in ICT that will further boost innovation in the market thus providing an important opportunity for the communications industry. NB-IoT technology enables low power consumption, better coverage and the possibility to connect great numbers of objects in a convenient way: all required features for Internet of Things. This technology can be applied to remote meter reading, asset tracking, smart agriculture, as well as on

Mobile is everything

Interview with Mats Granryd, Director General of GSMA

Mobile World Congress, to be held in Barcelona, 22 – 25 February 2016, is the world's largest trade show for the mobile leaders and provides the planet's best venue for mobile industry networking, new business opportunities and deal-making. It is organised by GSMA annually and this year there are a lot of surprises and novelties to be unveiled, such as smartphones as well as new services and future market trends.

We have talked with Mats Granryd, Director General of the GSMA, about the role of the GSM Association and asked him a few questions about the future trends in mobile services and the possible impacts on people's everyday lives.

What is the GSM Association and what is its role today?

The GSMA represents the interests of mobile operators worldwide, bringing together nearly 800 operators with more than 250 companies in the broader mobile ecosystem, including handset and device makers, software companies, equipment providers and internet companies, as well as organisations in adjacent industry sectors.

We work with our members to drive initiatives where the mobile industry can add enormous value to the evolving digital economy, in areas such as mobile identity,

Flavio Cattaneo, CEO TIM

Our Organization

The system of corporate governance adopted by Telecom Italia, articulated according to the traditional method, is focused on the role of leadership in the strategic decision taken by the Board of Directors, on the transparency of management choices, both within the company as well as in respect to the market, on the efficiency and effectiveness of the internal control system, on the strict discipline of potential conflicts of interest and on firm principles of conduct for transactions with related parties.

This system, which was designed and built in light of the principles elaborated by the Committee for the Corporate Governance of the Italian Stock Exchange and the best international practices, has been implemented with the adoption of codes, principles and procedures which characterize the activities of the different organizational and operational components, which are constantly subject to verification and update, to respond effectively to the evolution of the regulatory situation and to the mutation of operational practices.

We are convinced that a good corporate governance can and has to always identify new margins for improvement, in light of external stimuli and constraints, as well as application experience.

Our Business ethics

Our strategic markets are Italy and Brasil. Operations are conducted by dedicated Business Units: the Domestic Business Unit - it includes fixed and mobile voice and data services for retail customers and wholesale operators, as well as international wholesale services (Telecom Italia Sparkle) and IT solutions (Olivetti) - and the Brazil Business Unit (TIM Brasil).

Our organisation, in line with the evolution of the sector business models and market and technological trends, is shifting towards a "Digital Telco & Platform Company" model based on innovative infrastructure and an excellent customer service, increasingly aimed at disseminating premium services and digital content within a customisable platform, accessible anywhere and on any device. Commercial management of the retail customers - namely private (individual consumers and families) and business customers - is based on these organizational drivers:

- guaranteeing the end-to-end accountability of the marketing, sales and post-sales processes for each customer segment,
- encouraging the development of integrated "customer centric" offers and the focus on digital market services
- creating synergies between commercial channels to increase the efficiency and
